CLASS: BCA, VI SEMESTER

INTRODUCTION

The Online Stock Trading System is a web-based application that allows users to buy and sell stocks through an online platform. It provides real-time stock market data, helping users track price movements and make informed decisions. This system is designed to simplify trading by offering an easy-to-use interface for both beginners and experienced users.

It removes the dependency on physical brokers and enables users to manage their investments anytime and from anywhere. With features like live updates, portfolio tracking, and secure transactions, the system improves efficiency and accessibility in stock trading.

EXISTING SYSTEM

The existing stock trading system mainly depends on brokers or third-party agents to perform trading activities. Users must contact brokers to place buy or sell orders, which makes the process slow and less transparent. There is also a lack of direct control for users over their investments.

Additionally, the traditional system provides limited access to real-time data and lacks proper tools for analysis and tracking. Manual processes can lead to errors, delays, and inefficiencies, making it difficult for users to monitor their trading activities effectively.

PROPOSED WORK

The proposed system is an Online Stock Trading platform that allows users to perform trading operations digitally with ease. It provides real-time stock updates, enabling users to buy and sell stocks instantly. The system also includes features like user authentication, portfolio management, and transaction history.

This platform improves transparency and efficiency by automating trading processes and providing accurate data. Users can track their investments, analyze performance, and make better decisions using a secure and reliable system designed for modern trading needs.

OBJECTIVES

- * To provide an easy-to-use online trading platform
- * To allow users to buy and sell stocks anytime
- * To display real-time stock market data
- * To maintain user portfolio and transaction history
- * To reduce dependency on brokers

HARDWARE REQUIREMENTS:

PROCESSOR: intel CORE i3

RAM: 8.00 GB

HARD DISK : 256 GB

SYSTEM TYPE: 64-bit operating system

INPUT DEVICE: Mouse, Keyboard

SOFTWARE REQUIREMENTS:

OPERATING SYSTEM: Windows 11

FRONT END: HTML, CSS

BACK END: PYTHON

TOOLS: XAMPP

IDE: Visual Studio IDE

BROWSER: Internet Explorer

MODULES

➤ User Module

- * Registration

- * Login

➤ Stock Module

- * View stock prices

- * Search stocks

➤ Trading Module

- * Buy stocks

- * Sell stocks

➤ Portfolio Module

- * View holdings

- * Profit/Loss tracking

➤ Transaction Module

- * Transaction history

➤ Admin Module

- * Manage users

- * Manage stock data

CONCLUSION:

The Online Stock Trading System offers a modern and efficient solution for managing stock market investments. It simplifies the trading process by providing a digital platform with real-time updates and user-friendly features. This helps users make informed decisions and improves overall trading efficiency.

In conclusion, the system enhances transparency, reduces manual errors, and provides better control over trading activities. It is a valuable tool for both beginners and experienced users, making stock trading more accessible and effective in today's digital world.
